Experience

Deskcorp

Solutions Architect

Belém, Brazil

July 2026 – Present

- Designed software architectures and modeled business processes using Bizagi and draw.io, producing solution, class, and object diagrams to translate complex requirements into clear technical views for development teams.
- Served as a liaison between technical and business areas, facilitating cross-functional meetings to gather requirements, define architectures, and refine business rules.
- Identified and managed operational and technology risks, developing mitigation strategies and contingency plans to improve the resilience, security, and stability of deliverables.
- Administered identity and access management (IAM) across multiple platforms, ensuring secure client provisioning in accordance with compliance and information security policies.
- Managed the lifecycle of technical and project documentation, structuring and standardizing deliverables to ensure governance, traceability, and alignment with the approved scope.
- Facilitated communication in international projects, bridging language and technical gaps during multicultural meetings to align expectations and objectives among global stakeholders.
- Monitored logs, metrics, and pod health using Datadog and OpenShift, detecting anomalies and supporting incident analysis to improve environment observability and reliability.

Deskcorp

Quality Assurance Analyst (QA)

Belém, Brazil

May 2026 – July 2026

- Defined risk-based testing strategies, structuring the test pyramid, acceptance criteria, and regression scenarios to prioritize critical features and identify defects earlier in the development lifecycle.
- Developed and maintained a comprehensive suite of unit, integration, and end-to-end tests using TypeScript, Jest, and Testing Library, applying mocks, fixtures, and reusable test data to increase coverage and application reliability.
- Designed advanced load, stress, spike, and smoke performance tests using k6, with pass/fail thresholds based on response time, error rate, and throughput to identify bottlenecks and validate system scalability.
- Mapped business specifications to validation scenarios through a Requirements-to-Test Traceability Matrix, ensuring coverage of acceptance criteria and critical functionality.
- Automated the test pipeline using Node.js and continuous integration, configuring quality gates, execution reports, and regression checks to reduce manual effort and accelerate reliable releases.
- Analyzed test results and quality metrics, leading defect triage, root cause analysis, and flaky test remediation to drive continuous improvement across the development process.

Pará State Public Defender's Office

Systems Analyst

Belém, Brazil

August 2024 – May 2026

- Built optimized web applications using React, Next.js, and Tailwind CSS, implementing hybrid rendering and utility-first styling to improve loading speed and Core Web Vitals scores.
- Optimized system code by applying SOLID principles and the DRY approach, eliminating redundancies and reducing pipeline processing time by 70%.
- Collaborated with an Agile team to implement robust test coverage using Jest and React Testing Library, improving system stability and reducing production defects by 40%.
- Coordinated sprint planning and goal tracking across cross-functional teams, using Agile tools to maintain transparency and alignment with stakeholder deadlines.
- Managed source control and code review workflows through GitLab, improving the technical quality of deliverables and fostering a more collaborative and secure development environment.
- Containerized the application using Docker and Docker Compose, standardizing development environments and reducing setup time for new machines.

Freelance

Full Stack Developer

Remote

June 2023 – August 2024

- Implemented scalable design systems using React and shadcn/ui, ensuring visual consistency and simplifying the maintenance of complex styles with Styled Components.
- Structured service and controller architecture with NestJS, standardizing endpoints and streamlining frontend-backend integration through a well-defined API.
- Developed the data persistence layer using MongoDB, enabling flexible data flows and seamless integration between the Node.js backend and the database.
- Implemented unit tests using Jest and React Testing Library, increasing component reliability and enabling earlier defect detection during development.
- Developed integration and end-to-end tests using Selenium, validating critical application flows and reducing the risk of regressions across systems.
- Implemented smoke tests to rapidly validate critical functionality after releases, enabling earlier detection of deployment issues.
- Managed application infrastructure and deployment on Render, reducing monthly hosting costs by 50% without compromising performance or availability.

Frexco Alimentos

Full Stack Developer

Remote

May 2022 – June 2023

- Architected scalable web applications using TypeScript, React.js, and Material UI, ensuring visual consistency and component reuse while streamlining maintenance.
- Implemented and maintained independent services using Flask and Django, enabling efficient system integration and reducing server response times.
- Implemented unit tests using Jest and React Testing Library, expanding component coverage and improving release stability.
- Collaborated with cross-functional teams using Jira and Agile methodologies, supporting on-time sprint delivery and improving project transparency.

CS - Consoft

Full Stack Developer

Belém, Brazil

October 2021 – March 2022

- Developed REST APIs using Django REST Framework, enabling efficient system integration and improving application performance.
- Documented APIs using drf-yasg, improving clarity and standardization while simplifying service maintenance and integration.
- Built responsive and interactive web interfaces using Vue.js and Quasar, applying user experience and responsive design best practices to ensure visual consistency across devices.
- Collaborated with cross-functional teams to align requirements and implement solutions, contributing to consistent, high-quality deliverables across business areas.
- Managed tasks and Agile sprints using Trello and Jira, ensuring organization, effective prioritization, and on-time delivery.

Skills

- **Development:** TypeScript, JavaScript, Python, React, Vue.js, Next.js, Vite, Vuetify, Quasar, Tailwind CSS, Material UI, Styled Components, shadcn/ui, Node.js, NestJS, Django, Django REST Framework, Flask, REST APIs, drf-yasg, MongoDB, and MySQL
- **Testing and Quality:** Jest, Vitest, Testing Library, React Testing Library, Selenium, k6, unit, integration, E2E, performance, and smoke testing, test automation, quality gates, risk-based testing, traceability, and root cause analysis
- **Architecture and Governance:** Solutions Architecture, business process modeling, Bizagi, draw.io, IAM, requirements gathering, risk management, and technical documentation
- **DevOps and Management:** Git, GitHub, GitLab, Docker, Docker Compose, CI/CD, Datadog, OpenShift, Render, Jira, Trello, OpenProject, and Agile methodologies
- **Languages:** Portuguese (Native), English (Advanced), Spanish (Intermediate)

Education

CESUPA

Bachelor's Degree in Computer Science

Belém, Brazil

January 2019 – December 2022
